

The Future is Bright with the
Answers Ahead

USCLC Patient Registry Platform

Answers Ahead registry products are the fastest growing data management solutions. Our cloud-based solutions provide custom electronic data capture for patient registries in both academic institutions and private practice. Our strength is our ability to quickly meet our client's needs for secure, innovative and creative solutions for electronic data capture.

Answers Ahead's registry platform has been designed to overcome the challenges of time, affordability and security that challenge most platforms. We provide a solution that allows clinicians and researchers to define their own registry attributes while we carry out configuration and compliance at a reasonable cost and a short timeframe. It's that easy. All registries created by Answers Ahead are in full compliance with HIPAA Privacy and Security Standards and have stringent safeguards on:

About Answers Ahead

Founder Jeff Schwartz (a MF survivor) incorporated Answers Ahead in 2014 after working on the Cutaneous Lymphoma Tracker since 2005. He has been working as a software architect and security specialist for over 20 years.

- Electronic access
- Data transmission
- Electronic data storage
- Physical data storage

Answers Ahead registries may be modified at any time to optimize collection, reporting and analysis of specific data elements.

United States Cutaneous Lymphoma Consortium (USCLC) Cutaneous Lymphoma Registry

Answers Ahead is honored to have been chosen by the USCLC to help develop and host their new national registry for all cutaneous lymphomas. Working with the USCLC Registry Committee and its Task Forces, Answers Ahead has created dynamic, user friendly data collection forms that will enable both answers to specific questions related to potential prognostic factors and generation of comparative data to enhance patient care. The USCLC Registry is open to all USCLC members without additional charge but under Answers Ahead, can be further customizable for each site beyond the data that the USCLC is collecting. The Answers Ahead registry has been beta tested with cutaneous T cell lymphoma at 3 leading US academic institutions over the past 10 years with great success prior to branching out to an anticipated 50-100 US sites by 2017.

Custom Features of the USCLC Registry with Answers Ahead:

- Covers all types of cutaneous lymphoma: Mycosis fungoides (MF)/Sézary syndrome (SS), nonMF/nonSS Cutaneous T-cell Lymphoma and Cutaneous B-cell Lymphoma.
- Forms can be readily updated in a matter of days
- Easily programmable analysis
- High level security
- Full HIPAA compliance
- Facilitates multi-investigator studies
- Provides advanced analytics
- Platform able to carry out clinical trials
- Allows for patient input for both separate and consolidated analysis with physician data

HIPAA Privacy and Security Rule Compliance

Trusted by the nation's leading academic institutions and private practices, Answers Ahead provides a cloud-based solution that simplifies HIPAA compliance while cutting start-up time and costs. Member registries are always in full compliance with HIPAA Privacy and Security standards and have stringent safeguards on electronic access, data transmission, electronic data storage and physical data storage.

Cost Effective

Answers Ahead's speed to design and implementation provide unparalleled value and are the keys to our growth. The proprietary platform simply needs to be defined and configured for each study. Additionally, record attributes and data points may be added, removed, or changed at any stage of the study without incurring additional fees. Mid-study changes are easy to implement and rollout quickly to participants.

Cloud-based Solution

A cloud-based solution eliminates the need to install and support hosting hardware. Solutions requiring installation of hosting hardware on computers in your facility will require upfront costs and IT staff to provide ongoing support. Hosting hardware also requires compliance with HIPAA Security Standards, routine OS updates and security patches. Answers Ahead's cloud-based solution complies quickly and easily with HIPAA Security Standards without the need for additional IT support by sites.

The USCLC Registry for MF and SS will launch in November 2016

The USCLC encourages collaboration between individuals, groups and societies invested in the care and survival of patients with cutaneous lymphoma. Answers Ahead stands ready to facilitate sharing of data across data collection platforms and is able to provide electronic translation of data-bases so that such data can be collated and analyzed.
